

We are pleased to invite you to take part in the **Sustainable UK Cities Tour, which comes to Glasgow on Thursday 9th October to explore the role of cities in creating a low carbon economy.**

Find out how **your business could benefit from creating a low carbon economy for Glasgow** by joining local government representatives, business leaders and development agencies at this unique event.

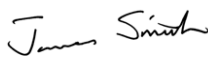

When the Sustainable UK Cities Tour visited Sheffield, Birmingham and Newcastle earlier this year, it identified a number of lucrative partnership opportunities between the public and private sector, including:

- Green public sector procurement that creates competitive advantages for accredited local suppliers;
- Localised energy infrastructures, generating cost effective energy for industry with the potential to sell excess back to the grid; and
- Local government support for industry in developing sustainable energy projects.

The event in Glasgow is being hosted by the UK Business Council for Sustainable Energy (UKBCSE) in partnership with Shell UK.

We would be delighted if you could join us.

Yours sincerely,

David Green
Chief Executive
UK BCSE

James Smith
Chairman
Shell UK

About us

The **UK Business Council for Sustainable Energy (UKBCSE)** brings together the UK's major energy companies to support the fastest transition possible to a low carbon economy.

Shell was one of the first energy companies to call for action on climate change. In addition to technologies for mitigating emissions from fossil fuels, Shell is working on later generation biofuels, wind, solar and hydrogen.
